Priceline

Background:
Priceline is one of the biggest online travel agencies in the world. Over the last 20 years they have grown into a multi-billion dollar company with annual revenues exceeding $11 billion. They own multiple online properties such as priceline.com, booking.com, kayak.com and agoda.com.

Problem:
Priceline has a high commitment to quality and uses modern development processes and techniques like agile, continuous integration and automation. However, they like many other software companies, are always looking for ways to increase productivity and reduce development costs while maintaining the highest quality standards across multiple browsers, operating systems and mobile platforms.

Solution:
Webomates CQ regression testing was able to help Priceline identify defects within 24 hours of creating a build and continued to monitor and identify defects. This gave Priceline an unprecedented ability to decide whether to deploy the build into production much faster and at reduced costs.

Results:
3 months: Over 15,000 test executions on 4 platforms. Webomates CQ identified 168 defects, 38 of which were business-impacting defects that helped Priceline/Flights “save tens of thousands of dollars” in production. Expanded to a 2 year contract across several business lines.

16 months: Now running WebomateS CQ for UI and API regression & feature testing across entire company. Over 122,019 test executions identified over 1,274 valid defects.
